

Breast Cancer: *Same Fight. New Weapon.*

Dr. Patricia E. Hanson, Board-Certified Radiologist

In the battle against breast cancer, one thing is clear: Early detection saves lives. Dr. Patricia E. Hanson at the Women's Imaging Center knows this very well. "If breast cancer is detected early, before it spreads, there is a 96% chance of a cure," she says. "And we now have a new weapon in our arsenal against breast cancer: Breast MRI." This revolutionary FDA-approved technology was recently acquired by the Women's Imaging Center to help provide the most accurate diagnoses possible. Dr. Hanson and the staff at the Women's Imaging Center were the first to introduce Breast MRI to Redding, because they're focused on winning the fight.

Breast MRI produces hundreds of high-resolution images of the breast from many different angles, which helps Dr. Hanson locate small tumors in their earliest stages.
